

# Are we running out of cash?

Analysis of ATM locations provided by  
OpenStreetMap

by Moritz

# What's the problem?

- cash still plays a very important role in Germany (51% of the whole transaction amount in 2018)
- closures of bank branches and ATMs in countryside areas
- no scientific analysis or visualization done
- information provided: location, operator(bank), wheelchair accessibility (sometimes description, opening hours), 20k entries
- cleaned and stored in a SQLite database

# Solution: the opportunity to form your own opinion

- overview about the current situation
- give the user the ability to explore the data
  - find dead spots/outliers
  - compare different regions
